

The urgent need to redesign training methods after COVID

Marco van Sterkenburg

CEO & co-founder - Drillster

Toughest training challenges after COVID

1. Continuous change
2. Loss of proficiency
3. No budget for new training programs
4. What digital training format or tool to choose?

Toughest training challenges after COVID

- 1. Continuous change**
2. Loss of proficiency
3. No budget for new training programs
4. What digital training format or tool to choose?

Change

- Continuously changing protocols
- How to unlearn the obsolete?
- How to learn the new?
- How to anchor and retain?
- How to apply the new protocols on the job?
- How to make new knowledge and skills demonstrable?

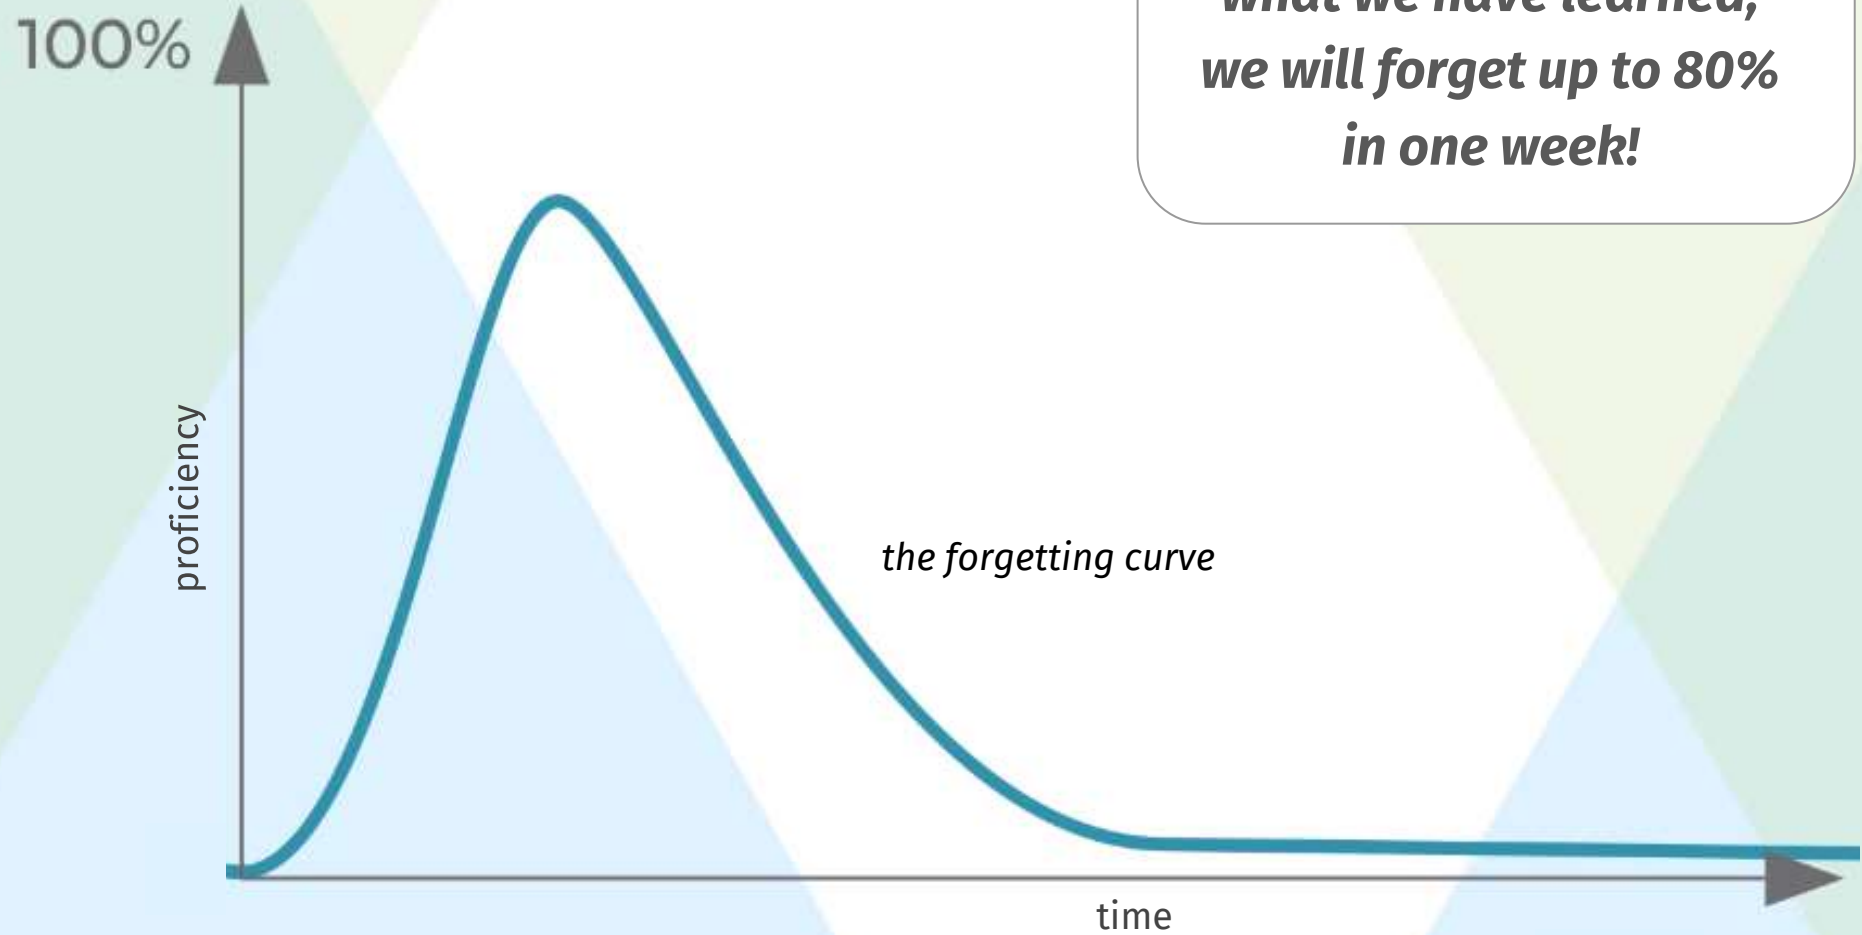

Change - today

- Information bulletin
- Followed by a test
- Focus on change only, not on the context of the change

- Correctly understood?
- Able to memorize and reproduce?
- Correctly apply it on the job?

***If we don't maintain
what we have learned,
we will forget up to 80%
in one week!***

Toughest training challenges after COVID

1. Continuous change
- 2. Loss of proficiency**
3. No budget for new training programs
4. What digital training format or tool to choose?

Loss of proficiency

- Feeling 'rusty'
- Ability to react quickly, but not reliably
- Significant increase in mishaps during COVID

Proficiency - today

- 
- Etc.
 - Simulator
 - Fire training
 - Door trainer
 - Face-to-face training
 - E-learning
 - Instructional videos
 - Manuals

Toughest training challenges after COVID

1. Continuous change
2. Loss of proficiency
- 3. No budget for new training programs**
4. What digital training format or tool to choose?

Not a different way of learning !

No budget

- Need to redesign training + no budget = innovation
- Learning is not just a cost
- Calculate ROI:
 - Shorter onboarding time
 - Less workplace incidents & accidents
 - Less absence time
 - Less non-conformity fines
 - Etc.
- This is the time to talk with regulators and authorities

Toughest training challenges after COVID

1. Continuous change
2. Loss of proficiency
3. No budget for new training programs
- 4. What digital training format or tool to choose?**

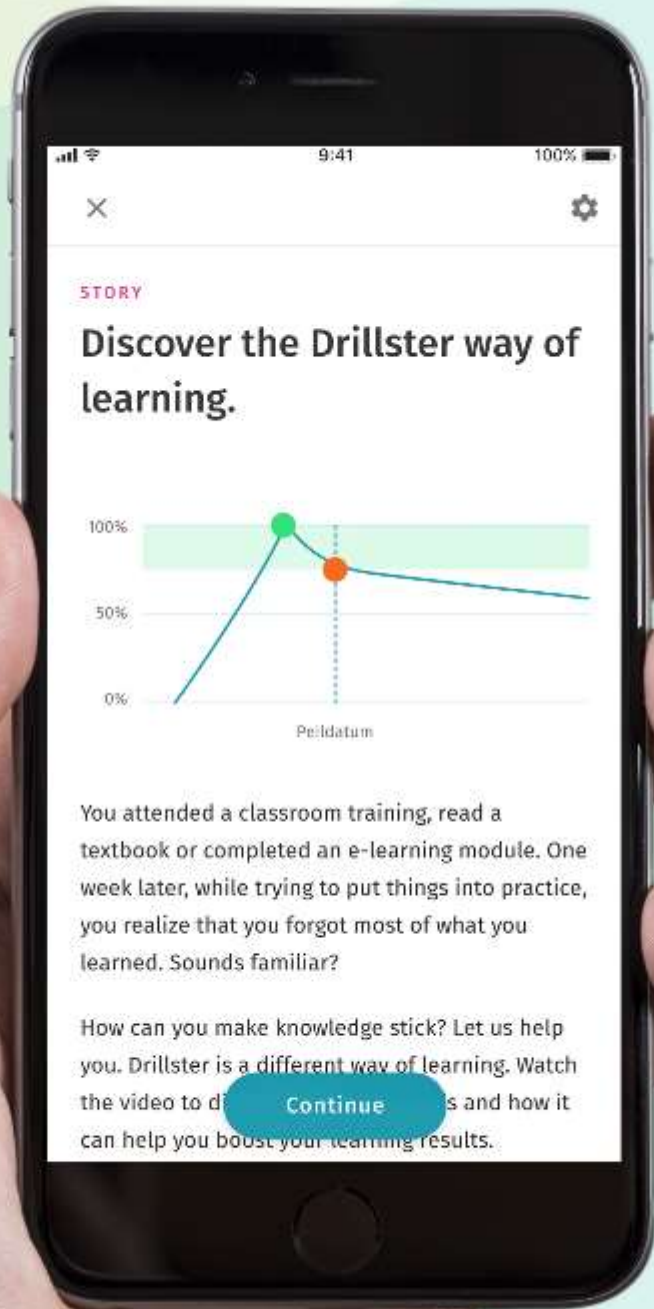

Rethink ~~training~~ learning

- Training = learning
- Not once a year, but a continuous process
- From passive to interactive learning

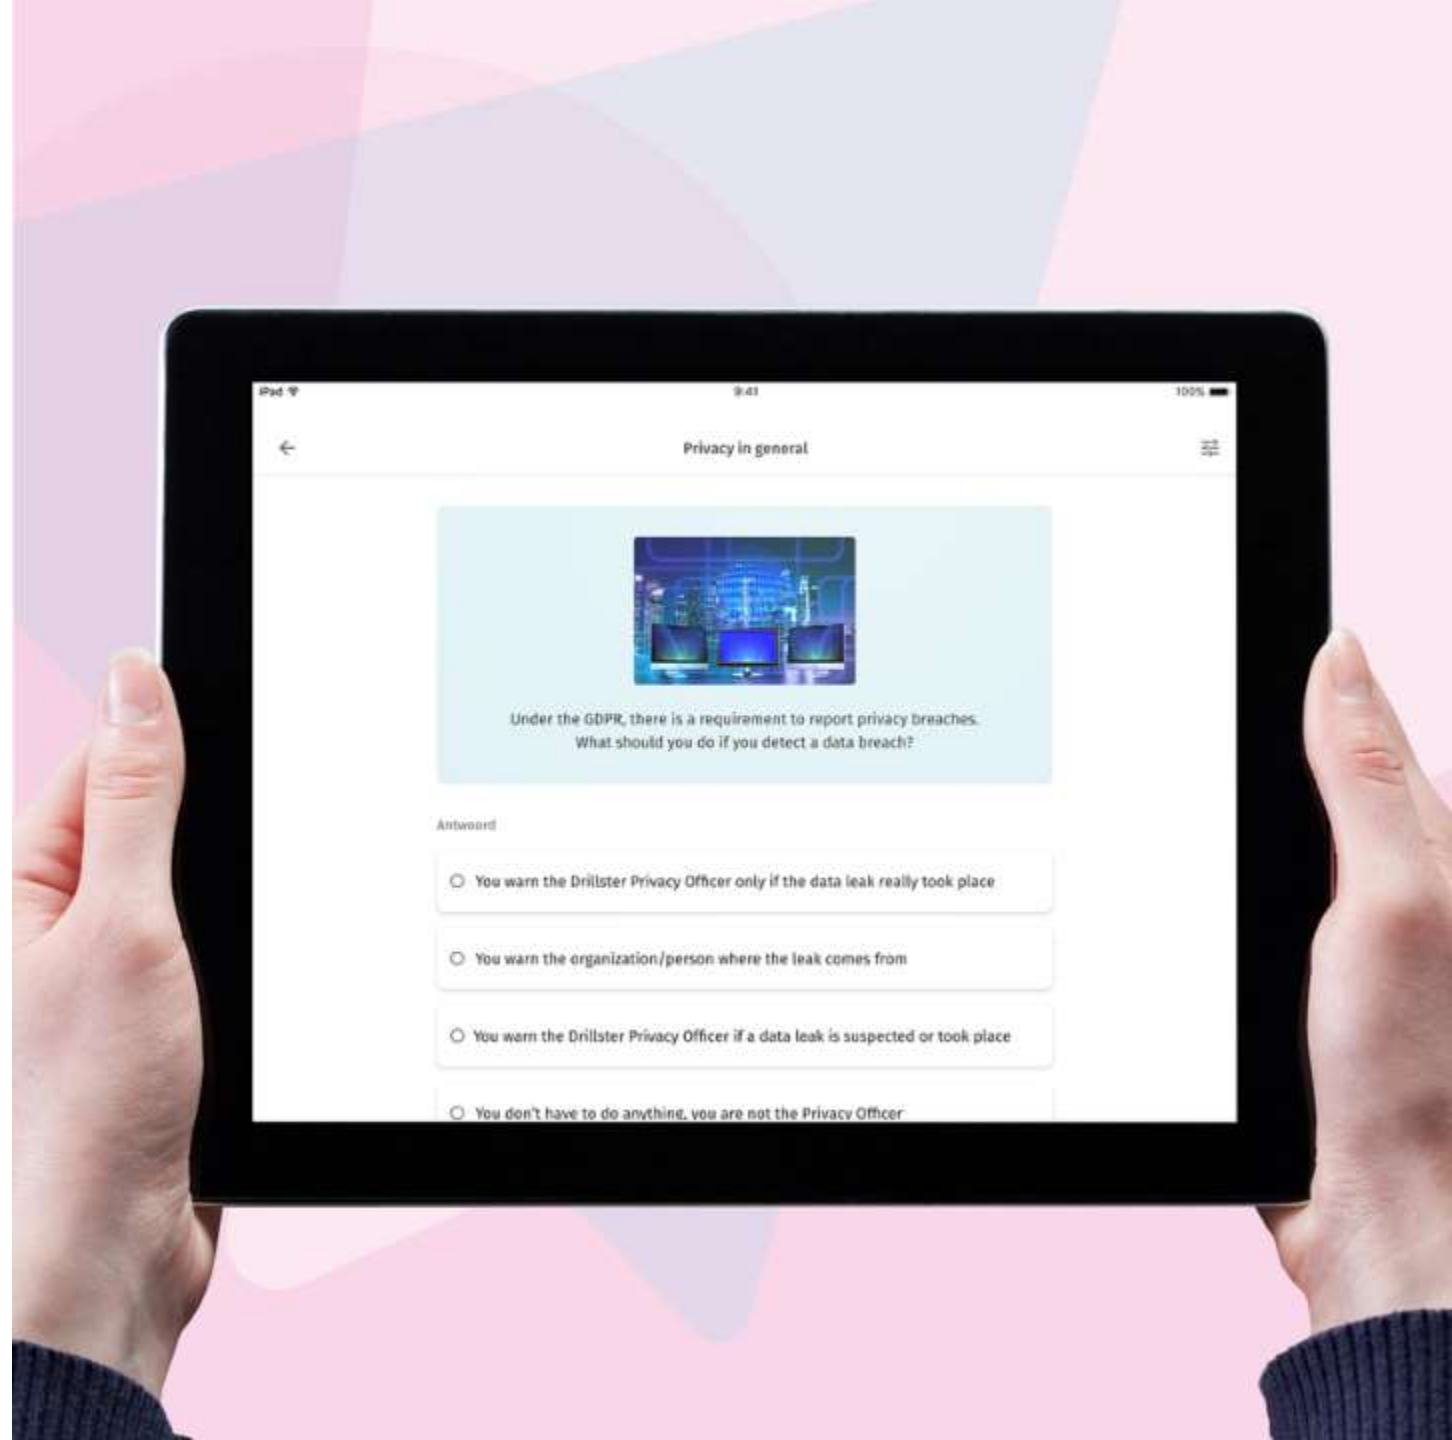

Adaptive learning

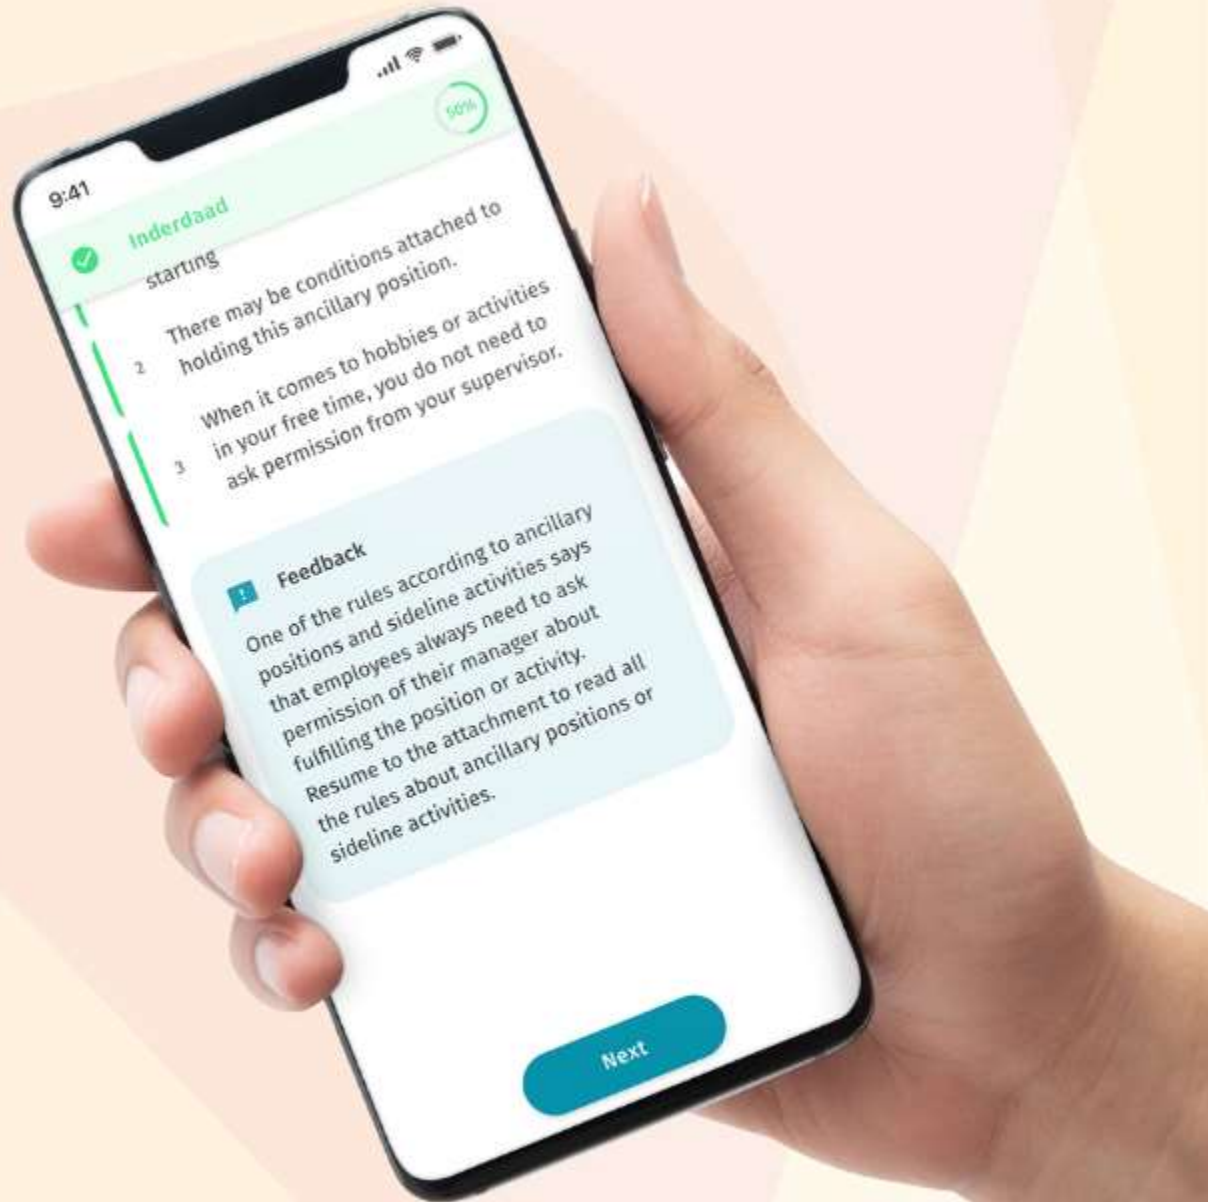

**Information
is presented in small
chunks**

Assessment-based learning

- Learning through questions, problems, scenarios, cases or dilemmas.
- Learning is more powerful and durable when it's effortful.

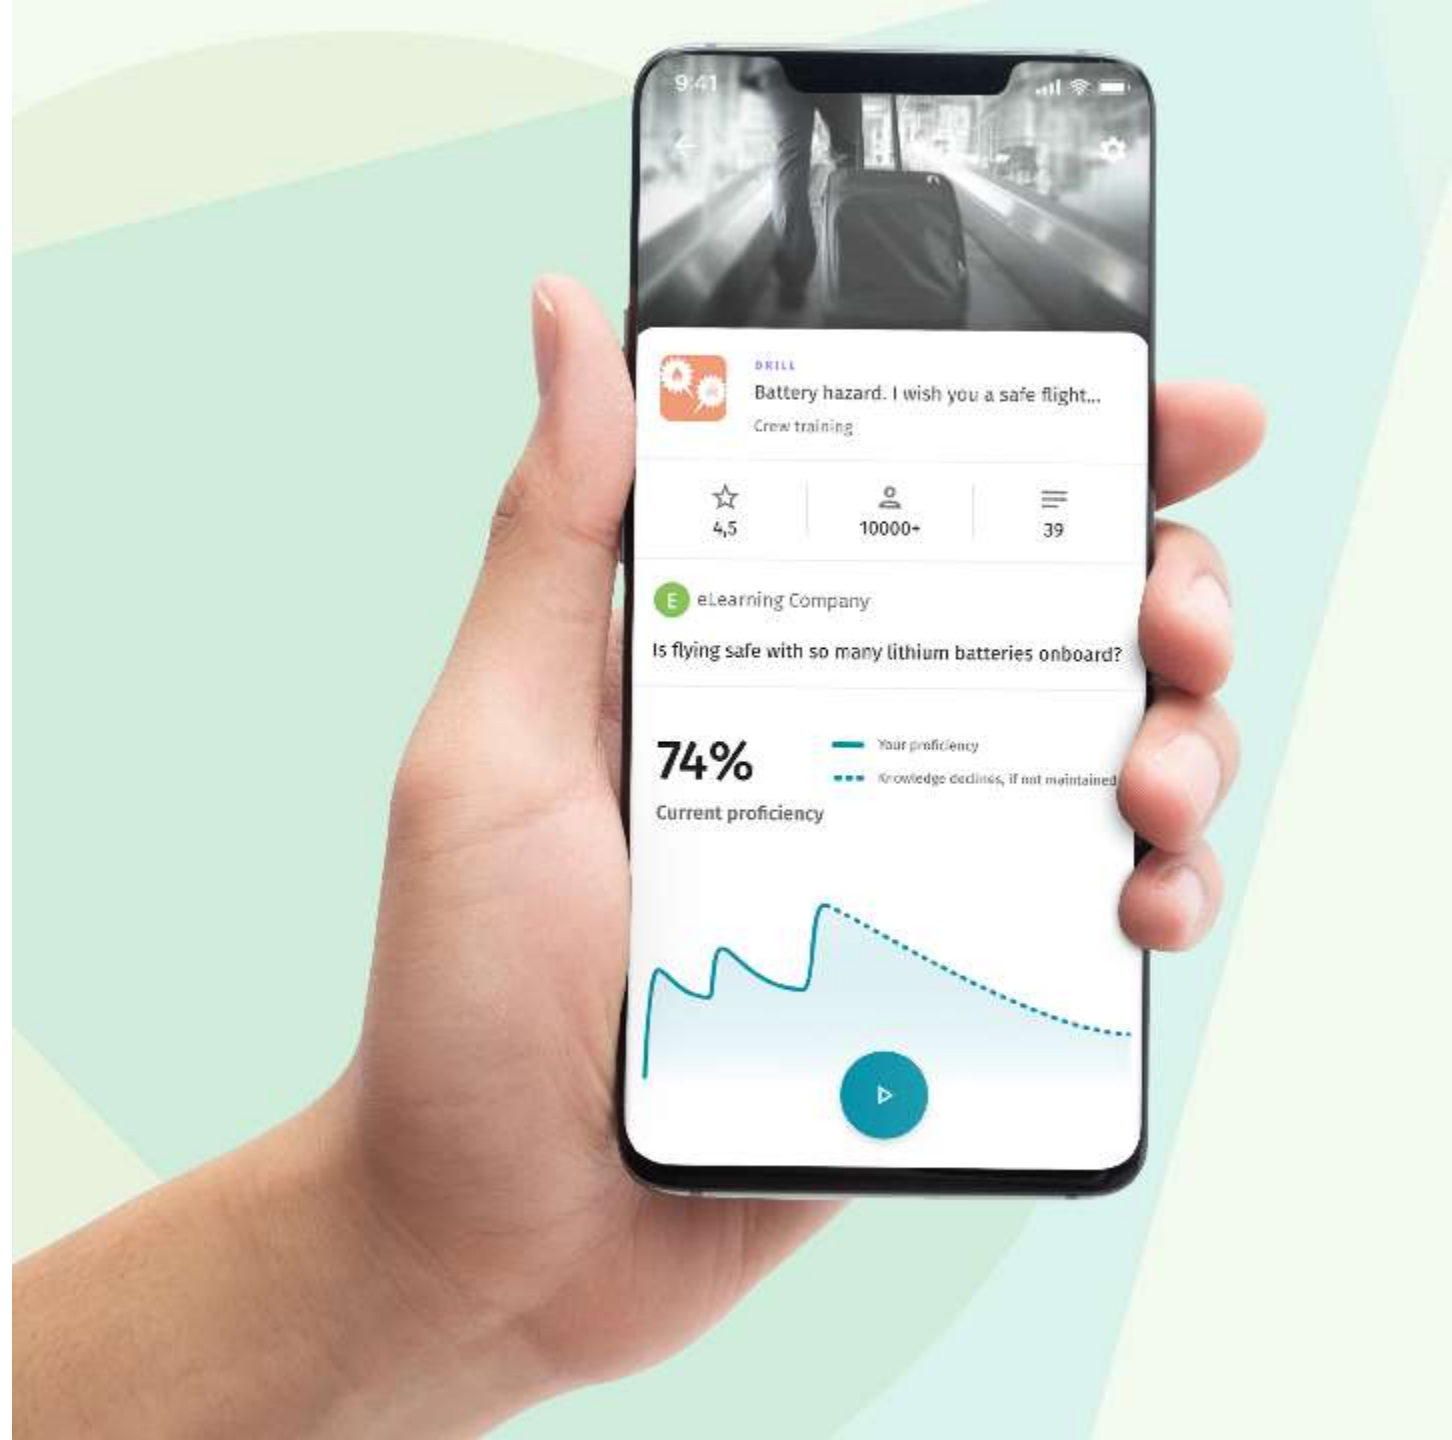

Immediate feedback

- Immediate remedial information after each question enhances the learning effect.
- Microlearning: feedback needs to be precise and to-the point.

Smart repetition

- The elements that you do not yet fully master, are repeated more frequently.
- Reinforcement
- Spaced repetition: increasing intervals between repetition of (similar) question.
- Automatic focus on the development areas of each individual learner.

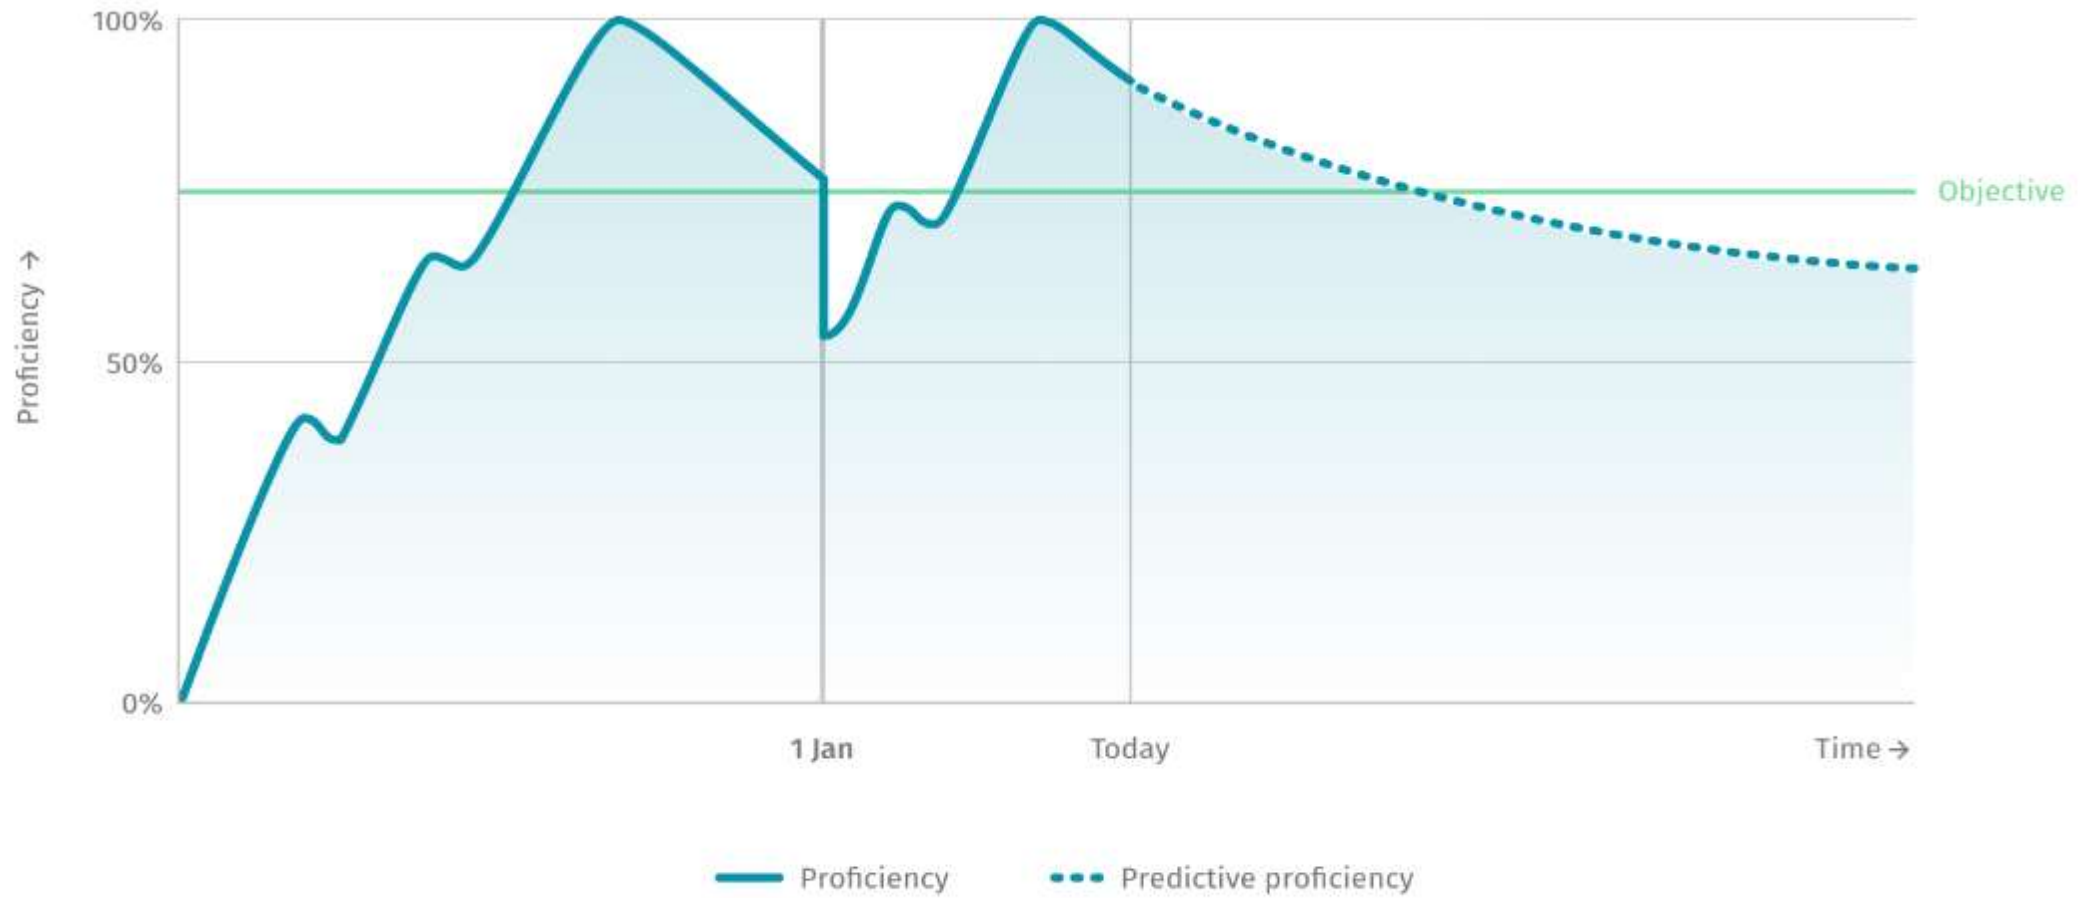

Anchoring and retention

- The Drillster app calculates how and when your knowledge declines if not maintained.
- A notification triggers the crew member to brush up on the knowledge and skills.

— Drillster — Normal curve

My proficiency

Impact

- > 40 study time savings
- Easy way to inform, develop and anchor change
- Retention: fights the loss of proficiency
- Less incidents and accidents
- Less work incidents related to absence time of staff

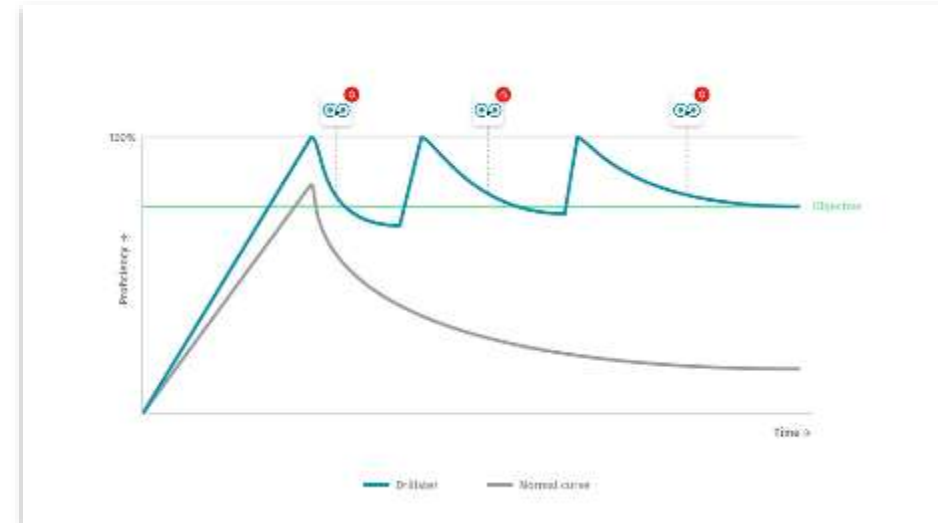

Cost savings airlines

- Pre-flight safety briefing no longer needed
- Replace the yearly recurrent prof check
- Less fines for non-conformity

Significant cost savings

Let's talk !
