

XR Pilot Training

Use Cases, Challenges, Successes

Shane CARROLL - Head of Training Software, Airbus

Gilad SCHERPF - Head of Aviation Training Development, Lufthansa Group

EATS – 9th November 2023 – Cascais Portugal

XR Training 2023

Technological Trends: Hardware

- **Lighter, more portable** devices
- Higher **resolution**
- New market player(s)

- **Personalization** (vision correction)
- **AR and VR** functionalities

- Pancake **Lenses**
- Viable **standalone** capability

Sources: Apple, Meta

XR Training 2023

Technological Trends: Improved Sensors

Source: Apple

Allowing:

- Rapid room setup
- In-Real-Life (IRL) Roaming

- Quick passthrough
- Easier AR development
- Hand Tracking
- Eye Tracking
 - Virtual eyes - External

XR Training 2023

Technological Trends: Accessible AR - Meta Quest 3

AR Experiences

*In flight video of ...
... an in-flight video*

Infinite canvass

Real and Virtual

XR Training 2023

Technological Trends: Software

Focused Design

- Train solo or train as a crew with remote and multi-user capabilities
- Use of Avatars to reflect different roles (crew, passengers, instructors)
- Multitude of devices to consume media – eg VR or iPad offer users the choice

Conversational User Interface (UI)

- Natural Speech
- Integration of Large Language Models (LLMs)
- Embedding of various data sources

Consideration of Competencies

- Tracking of key competencies (e.g. application of procedures, situational awareness)
- Personalized reports and debriefing options

XR Training 2023: Use Cases

Lufthansa Experience with XR

100.000+ Training Sessions

- Born from the need to **substitute real aircraft training** for Aircraft Security Search
- Meets **regulatory requirements**, approved by NAAs
- **VR Hubs** implemented in FRA & MUC
- Initially based on HTC Vive Pro & Leap Motion
- Viable **business case**
- **High acceptance** by trainees

XR Training 2023: Use Cases

LH Group Trial: Airbus Virtual Procedure Trainer (VPT)

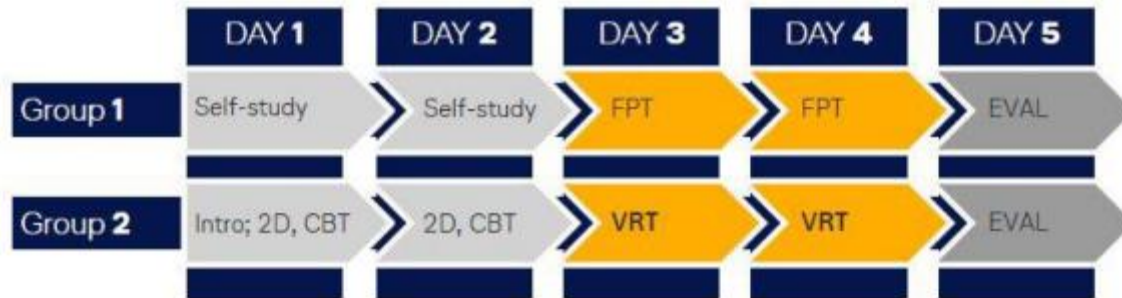

Demo at Lufthansa Aviation Training Center, VIE

XR Training 2023: Use Cases

LH Group Trial: Airbus Virtual Procedure Trainer (VPT)

- Two separate trial groups (16 trainees total) without previous Airbus experience to enable **comparability**
- On-site setup in FRA & VIE based on **Varjo Aero** headsets with instructor support (observer role)

- **Evaluation session** in FTD Level 2 or FFS for competency assessment
- Additional **survey** for VPT group delivering further insights and context

XR Training 2023: Use Cases

LH Group Trial: Airbus Virtual Procedure Trainer (VPT)

Key Findings

- Overall high **acceptance** through all age groups
- Partially, **fatigue** effects documented based on weight of VR headset and training execution
- Content and lesson design should be expanded to cover min. **two conventional training days**
- **Remote training option** desirable
- Added value of tablet-based software due to increase of **accessibility** and **repeatability**
- **Operator-specific** procedures to be considered

Mitigations / Comments

- Limitation of training time per session (**20 min.**) & day (**80 min.**)
- **Additional content** to be provided (e.g. abnormal, dynamic lessons)
- To be considered based on hardware availability
- Implementation into adapted training concept
- Operator-specific procedure packages, i.a.

XR Training 2023: Use Cases

Brunner DA42 XR Prototype

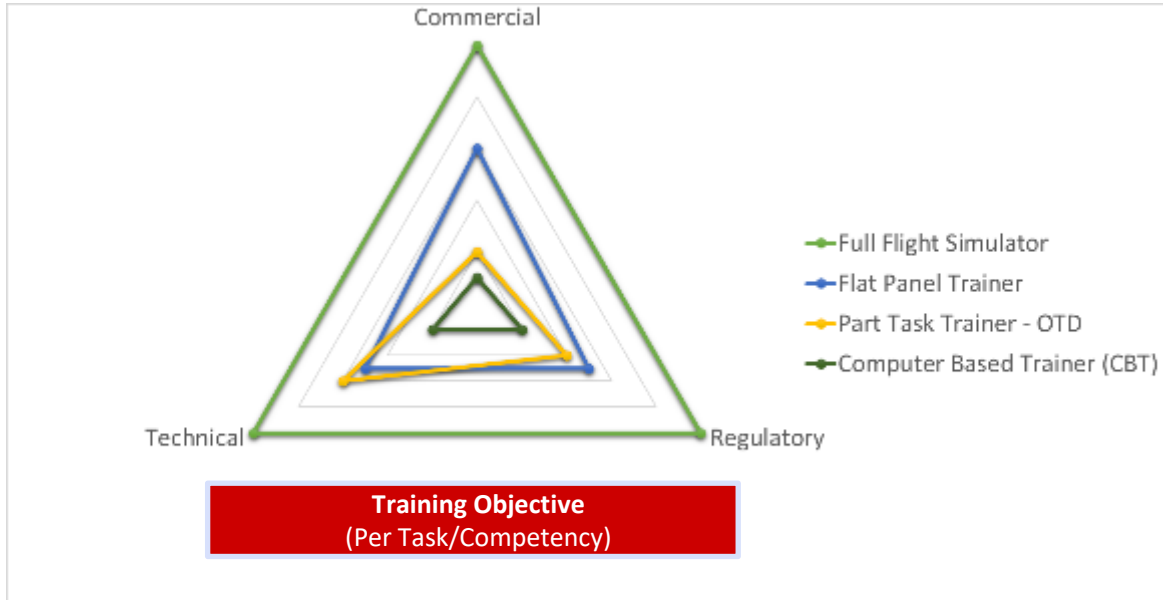

- 6 DOF NOVASIM MR platform by Brunner
- Varjo XR-3 Focal Edition headset
- Ongoing **EASA certification**
- Potential solution for **EVTOL & helicopters**

XR Training 2023

Training Value

Value Proposition – Design and Implementation

Consider Additional Capabilities

- Remote vs Onsite Use
- Repeatability (Affordability)
- Availability (Casual vs planned)
- Solo vs Multi-user Operation

Best Practices

Design:

- Seek both trainee and expert input
- Iterate with agile development process
- Have strong pedagogical rationales

Implementation:

- Apply the appropriate tool
- Change management / User Acceptance
- Implementation strategy

What's next?

Future Development

Immersive Training Solutions bring value now – and they will only improve

LUFTHANSA GROUP

- Smart Learning Hub platform including XR interface
- Multiple XR modules building on airline evidence (“real-world” scenarios)
- Customized solutions based on 3D aircraft database
- Collaboration on ICAO and EASA level - let's join forces!

AIRBUS

Airbus Virtual Procedure Trainer (VPT) - A320/A330/A350

- Extended procedures w/dynamic lessons
- Abnormal Procedures into 2024
- Investigating
 - Cabin / Maintenance
 - Simulation Integration Strategy
- Engage with Industry (including Regulators and Working groups)

Thank You
