

PROSIM

Virtual Instructor Extended Reality (ViXR)

A user perspective

By;

Capt. Cengiz Arbac, IFTC

René Veerman, ProSim- Training Solutions

Introducing :

IFTC

**First User of the
Virtual Instruction XR tool (ViXR) by ProSim**

IFTC is a company of GOZEN HOLDING with 9 companies serving aviation industry more than 45 years.

IFTC

Full Flight Simulator (FFS) - "The Mothership"

- Approximately 6500-7000 Hrs/year max capacity
- Scheduling challenges with many customers (Airlines/ATOs)
- Operational Suitability Date (OSD) by OEMs/EASA Regulations
- Peak training periods favored by all customers
- Number of experienced instructors located at various bases
- Expensive training (high purchasing & operational cost)

Add another FFS ? (6500 hrs / 8-10 M Euro), or :

Offload training tasks (hours) from FFS:

- Flight Training Device (FTD) (2500 hrs / 2,5 M Euro)
- Type representative Multi Crew Coordination (MCC) sim (1000 hrs / 500 k Euro)
- Procedures Trainer (500 hrs / 200 k Euro)
- Procedures Trainer + ViXR (1000 hrs / 250 k Euro)
- Optimized Training Curriculum by working with competent authorities
- Well defined regulations for device capabilities in training
- A solution to reduce the large number of instructor support hours

“WHY?”

“Do we need
new
technologies?”

*“This a picture of my
granddaughter Sara, 10
months old.”*

“As an industry we owe it to
this new generation and the
generations after us that we
do our utmost to make the
skies safer”

“We contribute to that goal
by making sure pilots are
provided with the optimum
solutions for each of the
training tasks”

ViXR Concept

- A tool that enables aircraft procedural training with or without the physical presence of a flight instructor.
- A new interactive tool for and together with the professional aviation training market using augmented reality technology combined with ProSim FSTDs.
- Fulfills the industry demand to improve training quality and consistency.

Making ViXR Possible

TXT Group consists of companies that have a solid network of **multidisciplinary competences** and **vertical excellences**.

We arrange them in a dynamic and productive way, according to the evolution of the technologies, markets and requirements.

Never better.

ViXR is based on:

- ProSim simulation
- Pacelab WEAVR  Platform
- Procedures are displayed on HoloLens 2 device by using WEAVR Player.
- Pilot is guided step-by-step by highlights, hints and voice messages
- Pilot activities are tracked by WEAVR Manager cloud
- Tracking data can be exported to customer LMS
- Simple plug & play AR solution

ViXR Features

- Responsive to aircraft systems in real time
- Normal and non-normal procedures
- Highlight and track procedural compliance
- Provide visual hints, flow indications and voice instructions
- Data recording for debriefing/analysis
- Customer tailored procedures
- Platform for data gathering for future applications (AI/ML)
- The perfect tool for enhanced (and real) EBT/CBTA

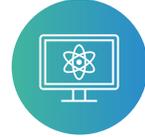

ViXR Goal

- Reduced instructor capacity
- Training quality improvement
- Overall training time and cost reduction
- Training consistency
- Excellent tool for pilot selection/assessment

ViXR Scaling Opportunities

Multiple units active simultaneously with one instructor

Machine learning

Artificial intelligence

Pilot-tailored predictive training

Virtual reality solutions

Mixed reality solutions

HUD alternative solution

ViXR

How does it work?

ViXR has exit conditions defined for each step and customizable by the end user; multiple conditions may be assigned for each step.

Visual Inspection

The highlight box will change from cyan to green.

Expected System State

ViXR will check for the appropriate state of a system or switch in the flight deck i.e. Batt On/Off

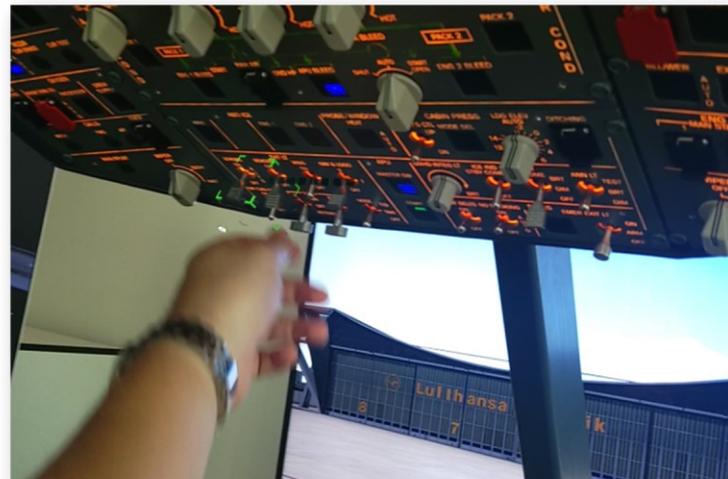

Touch input

The user needs to touch a flight deck item regardless of its state.

ViXR Modes of Operation

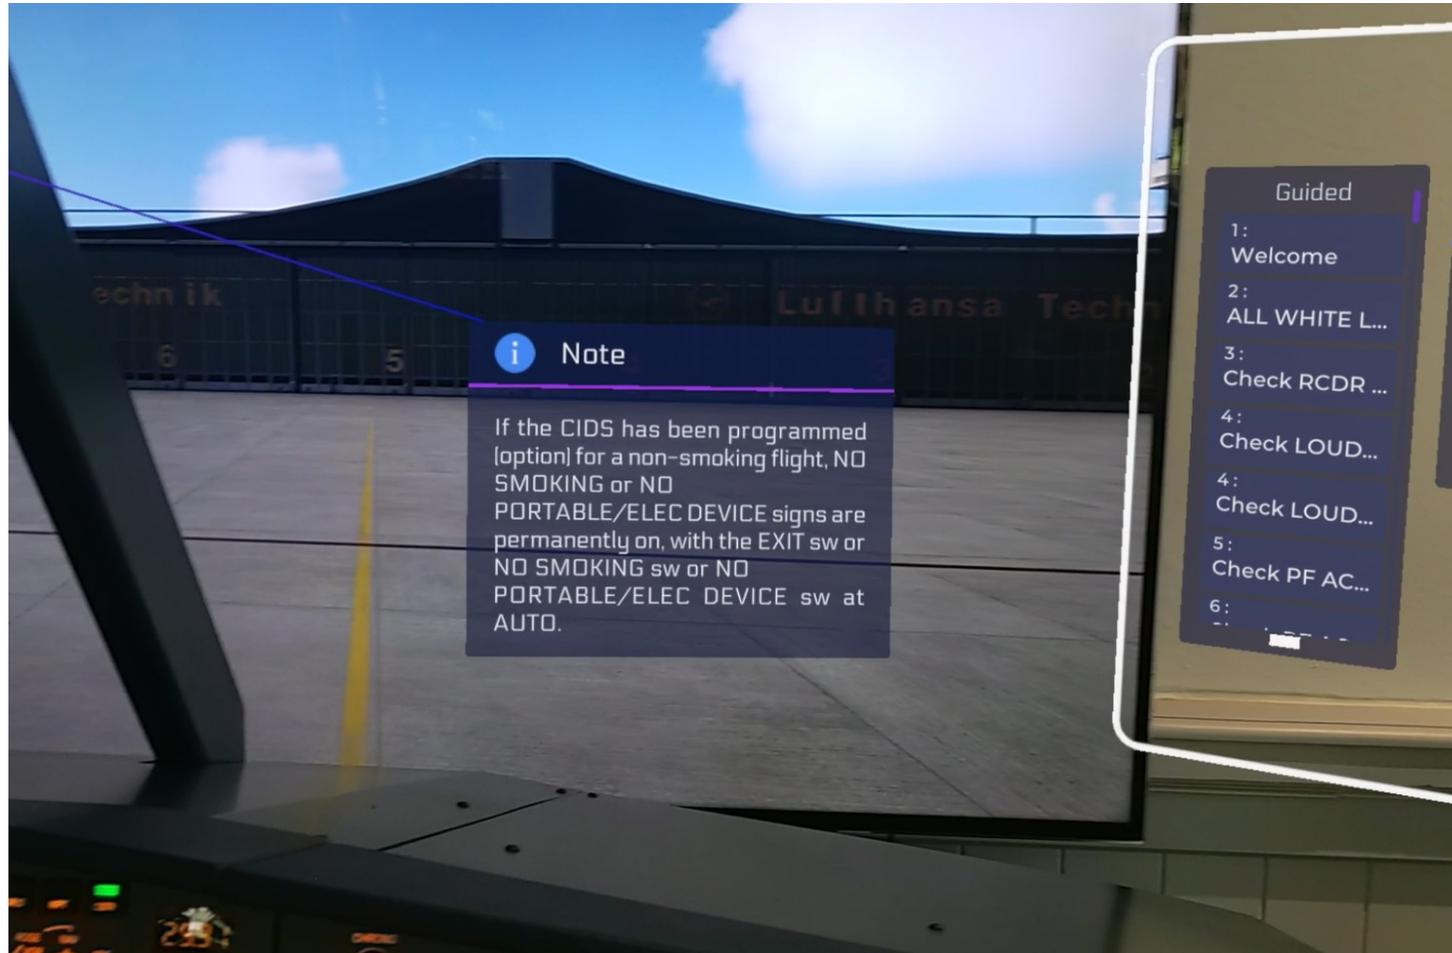

- Guided
 - Includes visual highlights, audio instructions, billboards with additional information, flow indication lines and aural confirmation when the step is completed.
- Assessment
 - Removes all the aids and tracks the trainee performance.

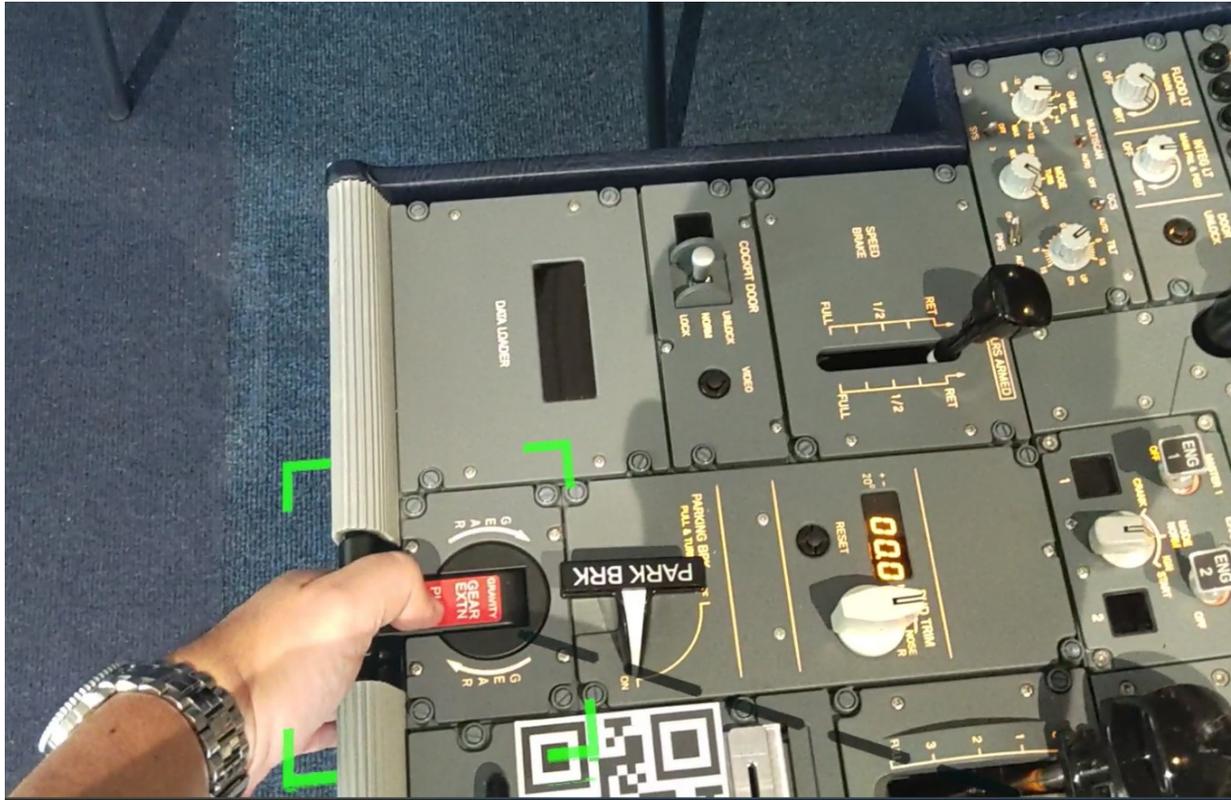

ViXR - AR Highlight

ViXR - AR Billboard

Current Step

ViXR – Pacelab WEAVR Manager (LMS)

Student performance Data/ Objective feedback

The screenshot displays the Pacelab WEAVR Manager interface. At the top, navigation tabs include Users, Procedures (selected), Analytics, Licenses, and Download. The main header shows 'All procedures' with summary statistics: Total 27 Procedures, On average 5 Executions, and Average Time 4.9 Minutes. A table lists three procedures: '01-Preliminary Cockpit Preparation', '02-Before Walk-Around', and '03-Cockpit Preparation'. The '03-Cockpit Preparation' procedure is expanded to show a performance graph. The graph plots 'Time (min)' against various steps: Start, Press CVR TEST pb, Press ELEC pb, APU fire test, Check HF, GRANTY GEAR ENTRY, Check FD, Check INTRAD rw, and Finish. The graph shows several peaks, with the highest peak occurring during the 'APU fire test' step. Metadata for the selected procedure includes Version v22.0 (03/07/20...), Mode Guided, and Platform WSA on Standard.

Output to AI engine for closed loop feedback learning

- ✓ Where in Training Footprint ?
